July 4, 2011

### **SCHWEIZER pays Dividend of 0.42 Euro**

Schramberg, July 4, 2011 – Shareholders present at Schweizer Electronic AG's annual shareholders' meeting on July 1, 2011 followed the proposal submitted by the Executive and Supervisory Boards and agreed to pay a dividend of 0.42 Euro per share for the fiscal year 2010. Thus shareholders benefit from the positive course of the business year, which constitutes a starting point for a continuous dividend payment in the coming years.

Beyond the proposal for paying a dividend, the plenum who gathered in Rottweil and who was enlarged by about 90 guests, agreed to all other proposals with a majority of 96 per cent each. With about 110 shareholders, 75 per cent of the share capital was present.

In their speeches Dr. Marc Schweizer, CEO, and Marc Bunz, CFO, reported on a record year in the company's history. In 2010 the annual turnover increased by 60 per cent to more than 105 Million Euro and with 16,9 Million. Euro EBIT was higher than forecast. SCHWEIZER's share price increased by 352 % from 5.20 Euro to 23.50 Euro during the course of the year. In the first quarter of 2011, too, SCHWEIZER succeeded in unabatedly continuing the dynamic growth that was started in the past year.

Based on a solid foundation, the company expects further growth. Furthermore, the Executive Board illustrated the focal points of the company's strategy. It is planned to further expand operations for PCBs and Tracing as well as strategically diversifying the company by additional areas of business. These areas include the division Systems, focussing on the optimisation of drive controls through embedding solutions as well as the creation of the division Energy. For this promising area CEO Marc Schweizer even presented a prototype of a thin-layer battery the size of a finger nail. Together with a partner the innovative Swabian company is currently working on the further development towards series maturity for this product. The partnering company is developing the necessary production equipment and has exclusively secured the battery technology, developed over the past 10 years by a renowned American research company.
